

# BUCINA proudly digital

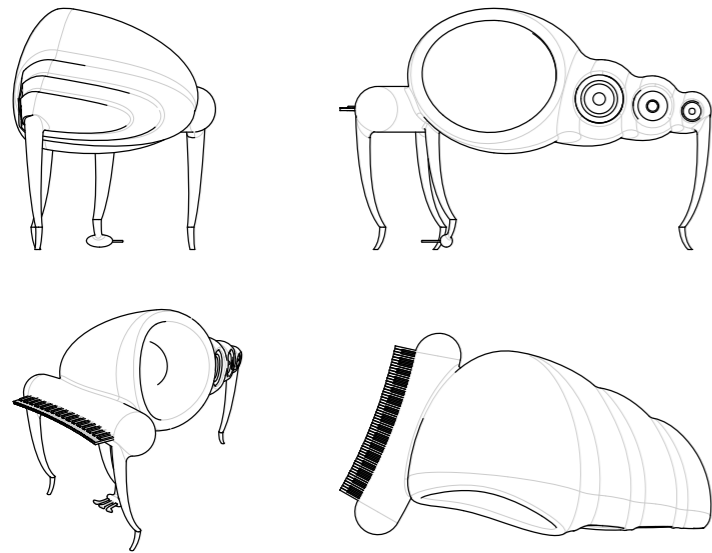

Design concept by

BUCINA is a digital stage piano at its most unleashed form. It celebrates the musical advantages of digital sound generation without formally forgetting about its history and its analogue predecessors.

The piano is built around a high-end speaker system. It is able to create a unique listening experience even for a large audience without losing the authenticity of 21<sup>st</sup> century high class instrument making. Thanks to a large horn for ultra low frequencies and its multi speaker design, it is able to accurately recreate an exceptional bandwidth of sound and spread it to the audience the same way a classic stage piano does.

The slightly bent claviature gives the player a unique comfortable playing ability and allows to reach for far keys even faster. When not in use, the claviature rests inside the housing. The keys have no underconstruction. This gives the purest feeling possible to the player, since there is no obstruction.

Bucina features a slide-out klaviature. Like this it is safe from dust and damage.

Bucina features an integrated touch display for setup and sheet music. It can automatically scroll through the song by recognizing the played sections.
